1 – First Steps with JupyterLab

Bálint Aradi

Course: Scientific Programming / Wissenchaftliches Programmieren (Python)

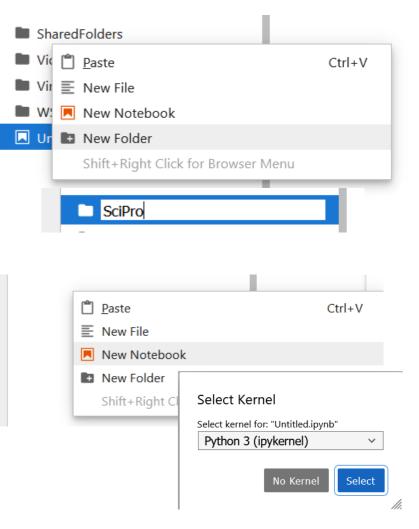

https://www.bccms.uni-bremen.de/people/b-aradi/wissen-progr/python/2023

Create a new notebook

- Start JupyterLab in the **scipro** Conda environment
- Create a special directory **SciPro** for all course related files (right click in the file explorer bar and select **New Folder**)
- Change to the **SciPro** folder (double click on the folder name)

- Create a new notebook in the SciPro folder (right click in the file explorer bar and select New Notebook)
- Select Python 3 (ipykernel) kernel

Start programming python

• You are ready to enter your first Python commands

	单 🔵 Untitled.ipynb - JupyterLab	\times +
\leftarrow	\rightarrow C D	ocalhost:8888/lab/tree/SciPro/Untitled.ipynb
\mathbf{C}	File Edit View Run Kernel Tabs	Settings Help
	+ 🗈 🛨 C	□ Launcher × ■ Untitled.ipynb +
	Filter files by name Q	B + X □ □ ▶ ■ C → Code ∨
0	/ SciPro /	<pre>[1]: print("hello")</pre>
≔	Name 🔺	hello
	• 🔲 Untitled.ipynb	[]:
*		

Navigaton in JupyterLab

Esc	Change to command mode
Enter	Change to edit mode
Shift-Enter	Execute current cell and focus on next one
Ctrl-Enter	Execute current cell and stay there
Up/Down arrows	Move between cells (command mode)
	Move between lines in cell (edit mode)
Α	Insert cell above (command mode)
В	Insert cell below (command mode)
С	Copy cell (command mode)
Χ	Cut cell (command mode)
V	Insert cell (command mode)
D, D	Delete cell (command mode)
Z	Undo last command (command mode)

Have fun!
